

PUBLIC SECTOR

Transform Public Procurement With a Flexible and Secure Platform Purpose-Built For the Public Sector

Unified Solution Enabling Efficiencies and Compliance

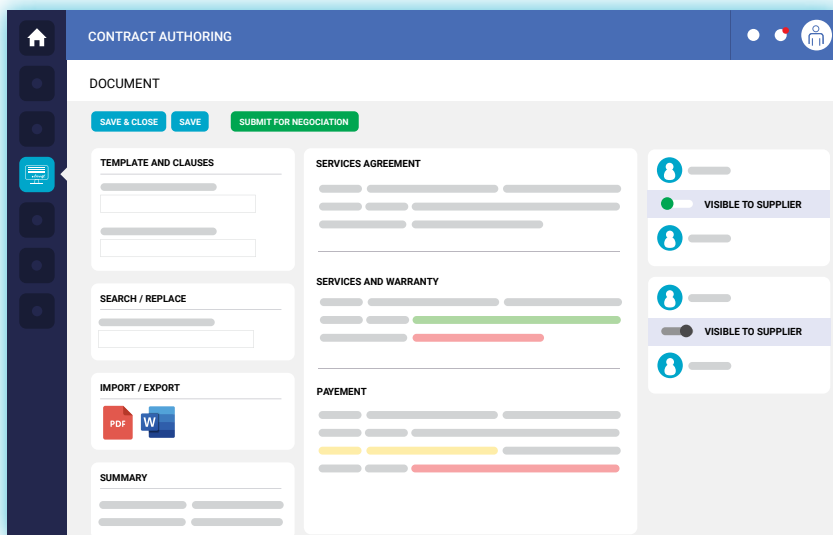

Agile Solution to Support Evolving Requirements

Secure Cloud Architecture

Public Sector Procurement has faced an unprecedented number of challenges and opportunities over the last several years and it has responded by rapidly evolving. This rapid evolution has inspired Public Procurement Professionals to re-evaluate existing processes and expectations against lessons learned. They are now chartering a strategic course where they can more effectively anticipate and sustainably respond to this dynamic environment while also elevating their value proposition and service levels.

In order to achieve this change, Public Sector Organizations are looking at a comprehensive approach that addresses modernizing processes, increasing responsiveness, delivering innovation, and ensuring compliance and data security. This includes investing in the people and the solutions that make up the Public Procurement process. With this holistic approach, Public Procurement entities will be positioned to respond to current and future challenges and deliver the necessary value to constituents and stakeholders.

PUBLIC SECTOR

Challenges Slowing Public Procurement Transformation

**Manual Processes**

Most eProcurement solutions still require manual processes to supplement processes, especially in the Public Sector. This results in inefficiency and error prone processes that slow value generation and jeopardize compliance.

**Decentralized Data**

Public Sector procurements are complex and involve multiple entities and varying requirements. This information is typically located in multiple and disparate systems making it difficult to collect data and expose insights.

**Inflexible Tools**

Procurement solutions often lack flexibility and fail to accommodate unique needs and hinder public procurement agencies where regulations often change.

**Missing Functionality**

Procurement teams struggle with managing the entire solicitation and contract cycles. Existing solutions lack the essential tools needed to effectively handle all aspects of the contract life-cycle, including renewals, risk management, and performance tracking.

Ivalua for Public Sector

Ivalua's cutting-edge technology supports the transformation of Public Procurement by addressing key challenges such as controlling spend, eliminating waste, automating compliance, and achieving complex objectives. By implementing our solution, your organization can enhance efficiency, maximize value, and ultimately deliver a better return to the taxpayers.

- ✓ Manage All Processes within a Unified Platform
- ✓ Support Evolving Requirements with Solution Agility
- ✓ Converge Data and Processes within a Single Solution
- ✓ Protect Critical Data in a Secure Cloud Architecture

Proven, Reliable Partner for Public Sector Organization
